

STATE OF MICHIGAN
STATE OFFICE OF ADMINISTRATIVE HEARINGS AND RULES

ADMINISTRATIVE HEARINGS FOR THE
DEPARTMENT OF HUMAN SERVICES

IN THE MATTER OF: [REDACTED],
Claimant

Reg. No.: 2009-16383
Issue No.: 2009; 4031
Case No.: [REDACTED]
Load No.: [REDACTED]
Hearing Date:
June 25, 2009
Wayne County DHS (43)

ADMINISTRATIVE LAW JUDGE: Colleen M. Mamelka

HEARING DECISION

This matter is before the undersigned Administrative Law Judge pursuant to MCL 400.9 and MCL 400.37 upon the Claimant's request for a hearing. After due notice, a hearing was held in Highland Park, Michigan on June 25, 2009. The Claimant appeared and testified, along with [REDACTED]. The Claimant was represented by [REDACTED] of [REDACTED]. [REDACTED] appeared on behalf of the Department.

ISSUES

Whether the Department properly determined that the Claimant was not disabled for purposes of Medical Assistance ("MA-P") and State Disability Assistance ("SDA") program?

FINDINGS OF FACT

The Administrative Law Judge, based on the competent, material and substantial evidence on the whole record, finds as material fact:

1. The Claimant submitted a public assistance application seeking MA-P retroactive from June 2007 and State Disability Assistance ("SDA") benefits on September 10, 2007.

2. On November 2, 2007, the Medical Review Team (“MRT”) determined the Claimant was not disabled finding the impairment(s) did not prevent employment for 90 days or more for SDA purposes and finding the Claimant capable of performing other work for MA-P purposes. (Exhibit 1, pp. 23, 24)
3. On November 6, 2007, the Department sent the Claimant an eligibility notice informing the Claimant that the MA-P and SDA benefits were denied. (Exhibit 1, p. 22)
4. On January 29, 2008, the Department received the Claimant’s Request for Hearing protesting the determination that he was not disabled.
5. On March 27, 2009, the State Hearing Review Team (“SHRT”) found the Claimant not disabled. (Exhibit 2)
6. The Claimant’s alleged physical disabling impairments are due to leg/ankle fractures, arthritis, gout, coronary artery disease and high blood pressure.
7. The Claimant’s alleged mental impairments are due to major depressive disorder.
8. At the time of hearing, the Claimant was 55 years old with a [REDACTED] birth date; was 6’ 1½” and weighed 200 pounds.
9. The Claimant has a limited education and work history.
10. The Claimant’s impairment(s) has lasted, or is expected to last continuously for a period for 12 months.

CONCLUSIONS OF LAW

The Medical Assistance (“MA”) program is established by Subchapter XIX of Chapter 7 of The Public Health & Welfare Act, 42 USC 1397, and is administered by the Department of Human Services (“DHS”), formally known as the Family Independence Agency, pursuant to MCL 400.10 *et seq* and MCL 400.105. Department policies are found in the Program

Administrative Manual (“PAM”), the Program Eligibility Manual (“PEM”), and the Program Reference Manual (“PRM”).

Disability is defined as the inability to do any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. 20 CFR 416.905(a) The person claiming a physical or mental disability has the burden to establish it through the use of competent medical evidence from qualified medical sources such as his or her medical history, clinical/laboratory findings, diagnosis/prescribed treatment, prognosis for recovery and/or medical assessment of ability to do work-related activities or ability to reason and make appropriate mental adjustments, if a mental disability is alleged. 20 CFR 413.913 An individual’s subjective pain complaints are not, in and of themselves, sufficient to establish disability. 20 CFR 416.908; 20 CFR 416.929(a) Similarly, conclusory statements by a physician or mental health professional that an individual is disabled or blind, absent supporting medical evidence, is insufficient to establish disability. 20 CFR 416.929(a)

When determining disability, the federal regulations require several factors to be considered including: (1) the location/duration/frequency/intensity of an applicant’s pain; (2) the type/dosage/effectiveness/side effects of any medication the applicants takes to relieve pain; (3) any treatment other than pain medication that the applicant has received to relieve pain; and (4) the effect of the applicant’s pain on his or her ability to do basic work activities. 20 CFR 416.929(c)(3) The applicant’s pain must be assessed to determine the extent of his or her functional limitation(s) in light of the objective medical evidence presented. 20 CFR 416.929(c)(2)

In order to determine whether or not an individual is disabled, federal regulations require a five-step sequential evaluation process be utilized. 20 CFR 416.920(a)(1) The five-step analysis requires the trier of fact to consider an individual's current work activity; the severity of the impairment(s) both in duration and whether it meets or equals a listed impairment in Appendix 1; residual functional capacity to determine whether an individual can perform past relevant work; and residual functional capacity along with vocational factors (i.e. age, education, and work experience) to determine if an individual can adjust to other work. 20 CFR 416.920(a)(4); 20 CFR 416.945

If an individual is found disabled, or not disabled, at any step, a determination or decision is made with no need evaluate subsequent steps. 20 CFR 416.920(a)(4) If a determination cannot be made that an individual is disabled, or not disabled, at a particular step, the next step is required. 20 CFR 416.920(a)(4) If an impairment does not meet or equal a listed impairment, an individual's residual functional capacity is assessed before moving from step three to step four. 20 CFR 416.920(a)(4); 20 CFR 416.945 Residual functional capacity is the most an individual can do despite the limitations based on all relevant evidence. 20 CFR 945(a)(1) An individual's residual functional capacity assessment is evaluated at both steps four and five. 20 CFR 416.920(a)(4) In determining disability, an individual's functional capacity to perform basic work activities is evaluated and if found that the individual has the ability to perform basic work activities without significant limitation, disability will not be found. 20 CFR 416.994(b)(1)(iv)

In general, the individual has the responsibility to prove disability. 20 CFR 416.912(a) An impairment or combination of impairments is not severe if it does not significantly limit an individual's physical or mental ability to do basic work activities. 20 CFR 416.921(a) The individual has the responsibility to provide evidence of prior work experience; efforts to work;

and any other factor showing how the impairment affects the ability to work. 20 CFR 416.912(c)(3)(5)(6) An individual is not disabled regardless of the medical condition, age, education, and work experience, if the individual is working and the work is a substantial, gainful activity. 20 CFR 416.920(a)(4)(i) In the record presented, the Claimant is not involved in substantial gainful activity therefore the Claimant is not disqualified from receipt of disability benefits under Step 1.

The severity of the Claimant's alleged impairment(s) is considered under Step 2. The Claimant bears the burden to present sufficient objective medical evidence to substantiate the alleged disabling impairments. In order to be considered disabled for MA purposes, the impairment must be severe. 20 CFR 916.920(a)(4)(ii); 20 CFR 916.920(b) An impairment, or combination of impairments, is severe if it significantly limits an individual's physical or mental ability to do basic work activities regardless of age, education and work experience. 20 CFR 916.920(a)(4)(ii); 20 CFR 916.920(c) Basic work activities means the abilities and aptitudes necessary to do most jobs. 20 CFR 916.921(b) Examples include:

1. Physical functions such as walking, standing, sitting, lifting, pushing, pulling, reaching, carrying, or handling;
2. Capacities for seeing, hearing, and speaking;
3. Understanding, carrying out, and remembering simple instructions;
4. Use of judgment;
5. Responding appropriately to supervision, co-workers and usual work situations; and
6. Dealing with changes in a routine work setting.

Id. The second step allows for dismissal of a disability claim obviously lacking in medical merit. *Higgs v Bowen*, 880 F2d 860, 862 (CA 6, 1988). The severity requirement may still be

employed as an administrative convenience to screen out claims that are totally groundless solely from a medical standpoint. *Id.* at 863 citing *Farris v Sec of Health and Human Services*, 773 F2d 85, 90 n.1 (CA 6, 1985) An impairment qualifies as non-severe only if, regardless of a claimant's age, education, or work experience, the impairment would not affect the claimant's ability to work. *Salmi v Sec of Health and Human Services*, 774 F2d 685, 692 (CA 6, 1985)

In the present case, the Claimant alleges disability due to a leg/ankle fracture with gout, arthritis, pain, coronary artery disease and high blood pressure, and depression.

On [REDACTED], the Claimant was admitted to the hospital with complaints of chest pain. The Claimant was found to have subtotal occlusion of the anterior descending, large vessel with small slow flow. The Claimant underwent an aortocoronary bypass surgery on [REDACTED] [REDACTED] without complication. The Claimant was discharged on [REDACTED] [REDACTED] in stable condition.

On [REDACTED], the Claimant was admitted to the hospital with complains of pain in the suprasternal region. There was no sign of infection, noting the healed surgical scar, and the Claimant's pain was managed with Vicodin. The Claimant was diagnosed with hypertension, hepatitis C, and coronary artery disease.

On [REDACTED], the Claimant was admitted to the hospital after complaints of multiple abscesses. An incision and drainage of the thigh, scrotal, and glutcal abscesses were performed. The Claimant was placed on IV antibiotics. The cultures were positive for MRSA, but negative at discharge. The Claimant was discharged on [REDACTED] [REDACTED] with the discharge diagnoses of multiple skin abscess, IV drug abuse, atherosclerotic heart disease, hepatitis C virus, hypertension, and congestive heart failure.

On [REDACTED], the Claimant attended a Department ordered evaluation. The Claimant was documented with osteoarthritis and spinal disorder but with satisfactory

ambulation. Reduced left ventricular function with limitation to activities secondary to coronary artery disease was noted as well as the Claimant's limitations during activities due to shortness of breath with maximum walking of approximately one block. The Claimant has systolic dysfunction secondary to reduced ejection fraction with no pulmonary edema found.

On [REDACTED], the Claimant was admitted after complaints of right ear pain with pus drainage. The Claimant was treated with antibiotics and ear drops. The Claimant was discharged on [REDACTED] [REDACTED] with the diagnoses of right otitis externa, uncontrolled hypertension, coronary artery disease, hepatitis C, and substance abuse.

On [REDACTED], the Claimant was admitted to the hospital as a level II trauma after being struck by a motor vehicle. The Claimant, a pedestrian, was positive for loss of consciousness, and right ankle pain. A CT scan of the brain and spine were negative. The right lower extremity x-ray showed right proximal fibular fracture and a right distal tib-fib fracture. The left lower extremity x-ray showed a left fibular fracture. The right lower extremity was splinted and casted with the left lower extremity was booted. The Claimant was discharged on [REDACTED].

On [REDACTED], the Claimant presented to the emergency room with complaints of chest pain. A CT scan revealed a 7.5 mm nodule in the right upper lobe (lung). A left hydrocele was noted.

On [REDACTED], the Claimant presented to the emergency room with complaints of sharp chest pain. The primary diagnosis was angina.

On [REDACTED], the Claimant attended a psychiatric evaluation. The Claimant was diagnosed with major depressive disorder, recurrent, severe with psychotic features;

polysubstance dependence; with anti-social personality disorder not ruled out. The Global Functioning Assessment was 45 with a guarded prognosis.

On [REDACTED], a Medical Examination Report was completed on behalf of the Claimant. The current diagnoses were hypertension, coronary artery disease, anemia, and hepatitis C. The Claimant was found unable to lift any weight and was limited to less than 2 hours of standing and/or walking. The Claimant's need for assistive device was noted as well as his right lower extremity being non-weight bearing.

As previously noted, the Claimant bears the burden to present sufficient objective medical evidence to substantiate the alleged disabling impairment(s). As summarized above, the Claimant has presented objective medical evidence establishing that he does have physical limitations on his ability to perform basic work activities. Accordingly, the Claimant has an impairment, or combination thereof, that has more than a *de minimis* effect on the Claimant's basic work activities. Further, the impairments have lasted, or are expected to last, continuously for twelve months therefore, the Claimant is not disqualified from receipt of MA-P benefits under Step 2.

In the third step of the sequential analysis of a disability claim, the trier of fact must determine if the Claimant's impairment, or combination of impairments, is listed in Appendix 1 of Subpart P of 20 CFR, Part 404. The Claimant asserts physical disabling impairment(s) due in part to leg/ankle fracture, arthritis, and gout. Listing 1.00 defines musculoskeletal system impairments. Disorders of the musculoskeletal system may result from hereditary, congenital, or acquired pathologic processes. 1.00A Impairments may result from infectious, inflammatory, or degenerative processes, traumatic or developmental events, or neoplastic, vascular, or toxic/metabolic diseases. 1.00A Regardless of the cause(s) of a musculoskeletal impairment,

functional loss for purposes of these listings is defined as the inability to ambulate effectively on a sustained basis for any reason, including pain associated with the underlying musculoskeletal impairment, or the inability to perform fine and gross movements effectively on a sustained basis for any reason, including pain associated with the underlying musculoskeletal impairment. Inability to ambulate effectively means an extreme limitation of the ability to walk; i.e., an impairment(s) that interferes very seriously with the individual's ability to independently initiate, sustain, or complete activities. 1.00B2b(1) Ineffective ambulation is defined generally as having insufficient lower extremity function to permit independent ambulation without the use of a hand-held assistive device(s) that limits the functioning of both upper extremities. (Listing 1.05C is an exception to this general definition because the individual has the use of only one upper extremity due to amputation of a hand.) *Id.* To ambulate effectively, individuals must be capable of sustaining a reasonable walking pace over a sufficient distance to be able to carry out activities of daily living. 1.00B2b(2) They must have the ability to travel without companion assistance to and from a place of employment or school. . . . *Id.* When an individual's impairment involves a lower extremity uses a hand-held assistive device, such as a cane, crutch or walker, the medical basis for use of the device should be documented. 1.00J4 The requirement to use a hand-held assistive device may also impact an individual's functional capacity by virtue of the fact that one or both upper extremities are not available for such activities as lifting, carrying, pushing, and pulling. *Id.*

Categories of Musculoskeletal include:

- 1.02 Major dysfunction of a joint(s) due to any cause: Characterized by gross anatomical deformity (e.g. subluxation, contracture, bony or fibrous ankylosis, instability) and chronic joint pain and stiffness with signs of limitation of motion or other abnormal motion of the affected joint(s), and findings on appropriate medically acceptable

imaging of joint space narrowing, bony destruction, or ankylosis of the affected joint(s). With:

- A. Involvement of one major peripheral weight-bearing joint (i.e., hip, knee, or ankle), resulting in inability to ambulate effectively as defined in 1.00B2b; or
- B. Involvement of one major peripheral joint in each upper extremity (i.e., shoulder, elbow, wrist, hand), resulting in inability to perform fine and gross movements effectively as defined in 1.00B2c

The medical records document the Claimant's leg/ankle fractures and continued need for assistive devices for ambulation. Arthritis and gout are mentioned in the medical records as part of the Claimant's medical history. Further, although the record documents the Claimant's need for an assistive device for effective ambulation along with the associated pain there was no evidence of anatomical deformity or findings on appropriate medically acceptable imaging of joint space narrowing, bony destruction, or ankylosis of the ankle or other joint. Ultimately, the Claimant's impairment may meet Listing 1.02 however the record is insufficient to meet the intent and severity requirement of this listing thus the Claimant can not be found disabled, or not disabled under this listing.

The Claimant asserts physical disabling impairments due to coronary artery disease and hypertension. Listings 4.00 defines cardiovascular impairment in part, as follows:

. . . any disorder that affects the proper functioning of the heart or the circulatory system (that is, arteries, veins, capillaries, and the lymphatic drainage). The disorder can be congenital or acquired. Cardiovascular impairment results from one or more of four consequences of heart disease:

- (i) Chronic heart failure or ventricular dysfunction.
- (ii) Discomfort or pain due to myocardial ischemia, with or without necrosis of heart muscle.
- (iii) Syncope, or near syncope, due to inadequate cerebral perfusion from any cardiac cause, such as obstruction of flow or disturbance in rhythm or conduction resulting in inadequate cardiac output.
- (iv) Central cyanosis due to right-to-left shunt, reduced oxygen concentration in the arterial blood, or pulmonary vascular disease.

An uncontrolled impairment means one that does not adequately respond to the standard prescribed medical treatment. 4.00A3f In a situation where an individual has not received ongoing treatment or have an ongoing relationship with the medical community despite the existence of a severe impairment, the disability evaluation is based on the current objective medical evidence. 4.00B3a If an individual does not receive treatment, an impairment that meets the criteria of a listing cannot be established. *Id.* Hypertension (high blood pressure) generally causes disability through its effect on other body systems and is evaluated by reference to specific body system(s) affected (heart, brain, kidneys, or eyes). 4.00H1 Hypertension, to include malignant hypertension, is not a listed impairment under 4.00 thus the effect on the Claimant's other body systems were evaluated by reference to specific body parts. Cardiomyopathy is evaluated under 4.02, 4.04, 4.05 or 11.04 depending on its effects on the individual. 4.00H3

Listing 4.02 discusses chronic heart failure. To meet the required level of severity while on a regimen of prescribed treatment the following must be satisfied:

- A. Medically documented presence of one of the following:
1. Systolic failure (see 4.00D1a(i)), with left ventricular end diastolic dimensions greater than 6.0 cm or ejection fraction of 30 percent or less during a period of stability (not during an episode of acute heart failure); or
 2. Diastolic failure (see 4.00D1a(ii)), with left ventricular posterior wall plus septal thickness totaling 2.5 cm or greater on imaging, with an enlarged left atrium greater than or equal to 4.5 cm, with normal or elevated ejection fraction during a period of stability (not during an episode of acute heart failure);

AND

- B. Resulting in one of the following:
1. Persistent symptoms of heart failure which very seriously limit the ability to independently initiate, sustain, or complete activities of daily living in an individual for whom an MC, preferably one experienced in the care of patients

with cardiovascular disease, has concluded that the performance of an exercise test would present a significant risk to the individual; or

2. Three or more separate episodes of acute congestive heart failure within a consecutive 12-month period (see 4.00A3e), with evidence of fluid retention (see 4.00D2b (ii)) from clinical and imaging assessments at the time of the episodes, requiring acute extended physician intervention such as hospitalization or emergency room treatment for 12 hours or more, separated by periods of stabilization (see 4.00D4c); or
3. Inability to perform on an exercise tolerance test at a workload equivalent to 5 METs or less due to:
 - a. Dyspnea, fatigue, palpitations, or chest discomfort; or
 - b. Three or more consecutive premature ventricular contractions (ventricular tachycardia), or increasing frequency of ventricular ectopy with at least 6 premature ventricular contractions per minute; or
 - c. Decrease of 10 mm Hg or more in systolic pressure below the baseline systolic blood pressure or the preceding systolic pressure measured during exercise (see 4.00D4d) due to left ventricular dysfunction, despite an increase in workload; or
 - d. Signs attributable to inadequate cerebral perfusion, such as ataxic gait or mental confusion.

Listing 4.04 discusses ischemic heart disease. If an individual does not receive treatment, an impairment is not found however, disability may be found if another impairment in combination with the cardiovascular impairment medically equals the severity of a listed impairment or based on consideration of the individual's residual functional capacity and age, education, and work experience. 4.00B3 To meet the severity requirement of Listing 4.04 while on prescribed treatment, one of the following must be met:

- A. Sign- or symptom-limited exercise tolerance test demonstrating at least one of the following manifestations at a workload equivalent to 5 METs or less:
 1. Horizontal or downsloping depression, in the absence of digitalis glycoside treatment or hypokalemia, of the ST segment of at least -0.10 millivolts (-1.0 mm) in at least 3 consecutive complexes that are on a level baseline in any lead other

than a VR, and depression of at least -0.10 millivolts lasting for at least 1 minute of recovery; or

2. At least 0.1 millivolt (1 mm) ST elevation above resting baseline in non-infarct leads during both exercise and 1 or more minutes of recovery; or
3. Decrease of 10 mm Hg or more in systolic pressure below the baseline blood pressure or the preceding systolic pressure measured during exercise (see 4.00E9e) due to left ventricular dysfunction, despite an increase in workload; or
4. Documented ischemia at an exercise level equivalent to 5 METs or less on appropriate medically acceptable imaging, such as radionuclide perfusion scans or stress echocardiography.

OR

- B. Three separate ischemic episodes, each requiring revascularization or not amenable to revascularization (see 4.00E9f), within a consecutive 12-month period (see 4.00A3e).

OR

- C. Coronary artery disease, demonstrated by angiography (obtained independent of Social Security disability evaluation) or other appropriate medically acceptable imaging, and in the absence of a timely exercise tolerance test or a timely normal drug-induced stress test, an MC, preferably one experienced in the care of patients with cardiovascular disease, has concluded that performance of exercise tolerance testing would present a significant risk to the individual, with both 1 and 2:

1. Angiographic evidence showing:
 - a. 50 percent or more narrowing of a nonbypassed left main coronary artery; or
 - b. 70 percent or more narrowing of another nonbypassed coronary artery; or
 - c. 50 percent or more narrowing involving a long (greater than 1 cm) segment of a nonbypassed coronary artery; or
 - d. 50 percent or more narrowing of at least two nonbypassed coronary arteries; or
 - e. 70 percent or more narrowing of a bypass graft vessel; and
2. Resulting in very serious limitations in the ability to independently initiate, sustain, or complete activities of daily living.

In the record presented, the Claimant underwent bypass surgery in June of 2007. The record documents additional treatment for chest pain and high blood pressure, as well as the diagnosis of severe coronary artery disease; however these records are insufficient to meet the intent and severity requirement of a listed impairment within 4.00.

The Claimant asserts physical disabling impairment due to Hepatitis C. Listing 5.00 defines digestive system impairments. Disorders of the digestive system include gastrointestinal hemorrhage, hepatic (liver) dysfunction, inflammatory bowel disease, short bowel syndrome, and malnutrition. 5.00A Medical documentation necessary to meet the listing must record the severity and duration of the impairment. 5.00B The severity and duration of the impairment is considered within the context of the prescribed treatment. 5.00C1 Hepatitis C is evaluated under 5.05, chronic liver disease. 5.00D4a(ii) Chronic liver disease is characterized by liver cell necrosis, inflammation, or scarring, due to any cause that persists for more than 6 months. 5.00D1 Symptoms include itching, fatigue, nausea, loss of appetite, or sleep disturbance. 5.00D3a Signs include jaundice, enlargement of the liver and spleen, ascites, peripheral edema, and altered mental status. 5.00D3b Treatment for hepatitis C usually includes a combination of interferon injections and oral ribavirin and usually is discontinued after 12 weeks if no early viral response. 5.00D4c

In this case, the Claimant has been diagnosed with hepatitis C but does not receive any treatment for this disease. Ultimately, based upon the hearing record, it is found that the Claimant's medical record does not support a finding that the Claimant's physical impairment(s), or combination of impairment(s), are "listed impairments" or equivalent to a listed impairment within 5.00; 20 CFR 416.920(a)(4)(iii) According to the medical evidence alone, the Claimant's

physical impairments do not meet or equal the intent or severity of the listing requirements thus he cannot be found to be disabled for purposes of the Medical Assistance program.

The Claimant asserts mental disabling impairments due to depression. Listing 12.00 encompasses adult mental disorders. The evaluation of disability on the basis of mental disorders requires documentation of a medically determinable impairment(s) and consideration of the degree in which the impairment limits the individual's ability to work, and whether these limitations have lasted or are expected to last for a continuous period of at least 12 months. 12.00A The existence of a medically determinable impairment(s) of the required duration must be established through medical evidence consisting of symptoms, signs, and laboratory findings, to include psychological test findings. 12.00B The evaluation of disability on the basis of a mental disorder requires sufficient evidence to (1) establish the presence of a medically determinable mental impairment(s), (2) assess the degree of functional limitation the impairment(s) imposes, and (3) project the probable duration of the impairment(s). 12.00D The evaluation of disability on the basis of mental disorders requires documentation of a medically determinable impairment(s) and consideration of the degree in which the impairment limits the individual's ability to work consideration, and whether these limitations have lasted or are expected to last for a continuous period of at least 12 months. 12.00A

Listing 12.04 defines affective disorders as being characterized by a disturbance of mood, accompanied by a full or partial manic or depressive syndrome. Generally, affective disorders involve either depression or elation. The required level of severity for these disorders is met when the requirements of both A and B are satisfied, or when the requirements in C are satisfied.

- A. Medically documented persistence, either continuous or intermittent, of one of the following:
 - 1. Depressive syndrome characterized by at least four of the following:

- a. Anhedonia or pervasive loss of interest in almost all activities; or
 - b. Appetite disturbance with change in weight; or
 - c. Sleep disturbance; or
 - d. Psychomotor agitation or retardation; or
 - e. Decreased energy; or
 - f. Feelings of guilt or worthlessness; or
 - g. Difficulty concentrating or thinking; or
 - h. Thoughts of suicide; or
 - i. Hallucinations, delusions, or paranoid thinking; or
2. Manic syndrome characterized by at least three of the following:
- a. Hyperactivity; or
 - b. Pressure of speech; or
 - c. Flight of ideas; or
 - d. Inflated self-esteem; or
 - e. Decreased need for sleep; or
 - f. Easy distractibility; or
 - g. Involvement in activities that have a high probability of painful consequences which are not recognized; or
 - h. Hallucinations, delusions, or paranoid thinking; or
3. Bipolar syndrome with a history of episodic periods manifested by the full symptomatic picture of both manic and depressive syndromes (and currently characterized by either or both syndromes)'

AND

- B. Resulting in at least two of the following:
1. Marked restriction on activities of daily living; or
 2. Marked difficulties in maintaining social functioning; or
 3. Marked difficulties in maintaining concentration, persistence, or pace; or
 4. Repeated episodes of decompensation, each of extended duration;

OR

- C. Medically documented history of chronic affective disorder of at least 2 years' duration that has caused more than a minimal limitation of ability to do basic work activities, with symptoms or signs currently attenuated by medication or psychosocial support, and one of the following:

1. Repeated episodes of decompensation, each of extended duration; or
2. A residual disease process that has resulted in such marginal adjustment that even minimal increase in mental demands or change in the environment would be predicted to cause the individual to decompensate; or
3. Current history of 1 or more years' inability to function outside a highly supportive living arrangement, with an indication of continued need for such an arrangement.

In this case, medical evidence shows that the Claimant has recurrent, major depression with psychotic features. Ultimately, the Claimant may meet the above listing however the objective medical documentation is insufficient to support a finding of disabled, or not disabled, under this listing. Accordingly, the Claimant's eligibility under Step 4 is considered. 20 CFR 416.905(a)

The fourth step in analyzing a disability claim requires an assessment of the Claimant's residual functional capacity ("RFC") and past relevant employment. 20 CFR 416.920(a)(4)(iv) An individual is not disabled if he/she can perform past relevant work. *Id.*; 20 CFR 416.960(b)(3) Past relevant work is work that has been performed within the past 15 years that was a substantial gainful activity and that lasted long enough for the individual to learn the position. 20 CFR 416.960(b)(1) Vocational factors of age, education, and work experience, and whether the past relevant employment exists in significant numbers in the national economy is not considered. 20 CFR 416.960(b)(3) RFC is assessed based on impairment(s), and any related symptoms, such as pain, which may cause physical and mental limitations that affect what can be done in a work setting. RFC is the most that can be done, despite the limitations.

To determine the physical demands (exertional requirements) of work in the national economy, jobs are classified as sedentary, light, medium, heavy, and very heavy. 20 CFR

416.967 Sedentary work involves lifting of no more than 10 pounds at a time and occasionally lifting or carrying articles like docket files, ledgers, and small tools. 20 CFR 416.967(a) Although a sedentary job is defined as one which involves sitting, a certain amount of walking and standing is often necessary in carrying out job duties. *Id.* Jobs are sedentary if walking and standing are required occasionally and other sedentary criteria are met. Light work involves lifting no more than 20 pounds at a time with frequent lifting or carrying objects weighing up to 10 pounds. 20 CFR 416.967(b) Even though weight lifted may be very little, a job is in this category when it requires a good deal of walking or standing, or when it involves sitting most of the time with some pushing and pulling of arm or leg controls. *Id.* To be considered capable of performing a full or wide range of light work, an individual must have the ability to do substantially all of these activities. *Id.* An individual capable of light work is also capable of sedentary work, unless there are additionally limiting factors such as loss of fine dexterity or inability to sit for long periods of time. *Id.* Medium work involves lifting no more than 50 pounds at a time with frequent lifting or carrying of objects weighing up to 25 pounds. 20 CFR 416.967(c) An individual capable of performing medium work is also capable of light and sedentary work. *Id.* Heavy work involves lifting no more than 100 pounds at a time with frequent lifting or carrying of objects weighing up to 50 pounds. 20 CFR 416.967(d) An individual capable of heavy work is also capable of medium, light, and sedentary work. *Id.* Finally, very heavy work involves lifting objects weighing more than 100 pounds at a time with frequent lifting or carrying objects weighing 50 pounds or more. 20 CFR 416.967(e) An individual capable of very heavy work is able to perform work under all categories. *Id.*

Limitations or restrictions which affect the ability to meet the demands of jobs other than strength demands (exertional requirements, i.e. sitting, standing, walking, lifting, carrying,

pushing, or pulling) are considered nonexertional. 20 CFR 416.969a(a) In considering whether an individual can perform past relevant work, a comparison of the individual's residual functional capacity with the demands of past relevant work. *Id.* If an individual can no longer do past relevant work the same residual functional capacity assessment along with an individual's age, education, and work experience is considered to determine whether an individual can adjust to other work which exists in the national economy. *Id.* Examples of non-exertional limitations or restrictions include difficulty function due to nervousness, anxiousness, or depression; difficulty maintaining attention or concentration; difficulty understanding or remembering detailed instructions; difficulty in seeing or hearing; difficulty tolerating some physical feature(s) of certain work settings (i.e. can't tolerate dust or fumes); or difficulty performing the manipulative or postural functions of some work such as reaching, handling, stooping, climbing, crawling, or crouching. 20 CFR 416.969a(c)(1)(i) – (vi) If the impairment(s) and related symptoms, such as pain, only affect the ability to perform the non-exertional aspects of work-related activities, the rules in Appendix 2 do not direct factual conclusions of disabled or not disabled. 20 CFR 416.969a(c)(2) The determination of whether disability exists is based upon the principles in the appropriate sections of the regulations, giving consideration to the rules for specific case situations in Appendix 2. *Id.*

Over the past 15 years, the Claimant's work history is limited with part-time general labor type work. In light of the foregoing, and in consideration of the Occupational Code, the Claimant's past relevant employment as a general laborer is considered unskilled, medium work.

The Claimant testified that he can lift/carry approximately 10 pounds with his left hand but is unable to lift/carry any weight with his right arm/hand due to numbness and limited functioning. The Claimant is able to walk short distance with assistive devices and can sit/stand

for short periods of time. The Claimant experiences difficulty to include pain, when bending and/or attempting to squat. The medical records impose similar restrictions. If the impairment or combination of impairments does not limit physical or mental abilities to do basic work activities, it is not a severe impairment(s) and disability does not exist. 20 CFR 416.920 In consideration of the Claimant's testimony and objective medical records, it is found that the Claimant is unable to meet the physical and mental requirements of past relevant work, therefore the fifth-step in the sequential evaluation process is required.

In Step 5, an assessment of the individual's residual functional capacity and age, education, and work experience is considered to determine whether an adjustment to other work can be made. 20 CFR 416.920(4)(v) At the time of hearing, the Claimant was 55 years old thus considered to be of advanced age for MA-P purposes. The Claimant has a limited education with no vocational training and a limited employment history. Disability is found disabled if an individual is unable to adjust to other work. *Id.* At this point in the analysis, the burden shifts from the Claimant to the Department to present proof that the Claimant has the residual capacity to substantial gainful employment. 20 CFR 416.960(2); *Richardson v Sec of Health and Human Services*, 735 F2d 962, 964 (CA 6, 1984). While a vocational expert is not required, a finding supported by substantial evidence that the individual has the vocational qualifications to perform specific jobs is needed to meet the burden. *O'Banner v Sec of Health and Human Services*, 587 F2d 321, 323 (CA 6, 1978). Medical-Vocational guidelines found at 20 CFR Subpart P, Appendix II, may be used to satisfy the burden of proving that the individual can perform specific jobs in the national economy. *Heckler v Campbell*, 461 US 458, 467 (1983); *Kirk v Secretary*, 667 F2d 524, 529 (CA 6, 1981) *cert den* 461 US 957 (1983). An individual of

advanced age is significantly affected in his/her ability to adjust to other work. 20 CFR 416.963(e)

In the record presented, the Claimant's residual functional capacity for work activities on a regular and continuing basis does include the ability to meet at least the physical and mental demands required to perform sedentary work. After review of the entire record and using the Medical-Vocational Guidelines [20 CFR 404, Subpart P, Appendix II) as a guide, specifically Rule 201.01, it is found that the Claimant is disabled for purposes of the MA-P program at Step 5.

The State Disability Assistance ("SDA") program, which provides financial assistance for disabled persons, was established by 2004 PA 344. DHS administers the SDA program pursuant to MCL 400.10 et seq. and Michigan Administrative Code ("MAC R") 400.3151 – 400.3180. Department policies are found in PAM, PEM, and PRM. A person is considered disabled for SDA purposes if the person has a physical or mental impairment which meets federal SSI disability standards for at least ninety days. Receipt of SSI or RSDI benefits based on disability or blindness, or the receipt of MA benefits based on disability or blindness (MA-P) automatically qualifies an individual as disabled for purposes of the SDA program.

In this case, the Claimant is found disabled for purposes of the Medical Assistance ("MA-P") program, therefore the Claimant's is found disabled for purposes of continued SDA benefits.

DECISION AND ORDER

The Administrative Law Judge, based upon the findings of fact and conclusions of law, finds the Claimant disabled for purposes of the Medical Assistance program and the State Disability Assistance program.

It is ORDERED:

1. The Department's determination is REVERSED.
2. The Department shall initiate review of the September 2007 application to determine if all other non-medical criteria are met and inform the Claimant and his representative of the determination.
3. The Department shall supplement the Claimant any lost benefits he was entitled to receive if otherwise eligible and qualified in accordance with department policy.
4. The Department shall review the Claimant's continued eligibility in July of 2011 in accordance with department policy.

Colleen M. Mamelka
Administrative Law Judge
For Ishmael Ahmed, Director
Department of Human Services

Date Signed: 06/29/09

Date Mailed: 06/30/09

NOTICE: Administrative Hearings may order a rehearing or reconsideration on either its own motion or at the request of a party within 30 days of the mailing date of this Decision and Order. Administrative hearings will not order a rehearing or reconsideration on the Department's motion where the final decision cannot be implemented within 90 days of the filing of the original request.

The Claimant may appeal the Decision and Order to the Circuit within 30 days of the receipt of the Decision and Order or, if a timely request for rehearing was made, within 30 days of the recip date of the rehearing decision.
