

STATE OF MICHIGAN
STATE OFFICE OF ADMINISTRATIVE HEARINGS AND RULES

ADMINISTRATIVE HEARINGS FOR THE
DEPARTMENT OF HUMAN SERVICES

IN THE MATTER OF: [REDACTED],
Claimant

Reg. No.: 2009-17510
Issue No.: 2009
Case No.: [REDACTED]
Load No.: [REDACTED]
Hearing Date:
June 1, 2009
Macomb County DHS (12)

ADMINISTRATIVE LAW JUDGE: Colleen M. Mamelka

AMENDED HEARING DECISION

This matter is before the undersigned Administrative Law Judge pursuant to MCL 400.9 and MCL 400.37 upon the Claimant's request for a hearing. After due notice, a hearing was conducted from Clinton Township, Michigan on June 1, 2009. The Claimant appeared and testified. The Claimant was represented by [REDACTED] of [REDACTED]. [REDACTED] appeared on behalf of the Department. At the Claimant's request, the record was extended to allow for the submission of additional medical records.

On June 29, 2009, the additional records were received, reviewed, and entered in to the record as Exhibit 3. The entire record was forwarded to the State Hearing Review Team ("SHRT") for consideration. On July 29, 2009, the SHRT found the Claimant not disabled. This matter is now before the undersigned for a final determination.

ISSUE

Whether the Department properly determined that the Claimant was not disabled for purposes of Medical Assistance ("MA-P") benefit program retroactive from March 2008?

FINDINGS OF FACT

The Administrative Law Judge, based on the competent, material and substantial evidence on the whole record, finds as material fact:

1. The Claimant submitted an application for public assistance seeking Medical Assistance (“MA-P”) retroactive from March 2008 on April 10, 2008.
2. On July 7, 2008, the Medical Review Team (“MRT”) deferred the disability determination in order for additional medical evidence to be secured and submitted for consideration. (Exhibit 1, pp. 148, 149)
3. On August 15, 2008, the Claimant attended the department ordered Internist evaluation which included a Pulmonary Function Study. (Exhibit 1, pp. 255 – 260)
4. On September 22, 2008, the Medical Review Team (“MRT”) determined the Claimant was not disabled for purposes of the MA-P program. (Exhibit 1, pp. 261, 262)
5. On September 30, 2008, the Department sent an Eligibility Notice to the Claimant informing her that she was found not disabled. (Exhibit 1, p. 266)
6. On December 17, 2008, the Department received the Claimant’s written Request for Hearing. (Exhibit 1, p. 268)
7. On April 20, 2009, the State Hearing Review Team (“SHRT”) determined the Claimant not disabled finding the Claimant capable of performing other work. (Exhibit 2)
8. The Claimant’s alleged physical disabling impairment(s) are due to severe asthma, chest pain, coronary artery disease, hypertension, and obesity.
9. The Claimant has not alleged any mental disabling impairment(s).
10. At the time of hearing, the Claimant was 53 years old with a [REDACTED] birth date; was 5’1” in height; and weighed 200 pounds.

11. The Claimant is a high school graduate with an employment history of a caregiver, shift supervisor, and grocery store clerk.

CONCLUSIONS OF LAW

The Medical Assistance (“MA”) program is established by Subchapter XIX of Chapter 7 of The Public Health & Welfare Act, 42 USC 1397, and is administered by the Department of Human Services (“DHS”), formally known as the Family Independence Agency, pursuant to MCL 400.10 *et seq* and MCL 400.105. Department policies are found in the Program Administrative Manual (“PAM”), the Program Eligibility Manual (“PEM”), and the Program Reference Manual (“PRM”).

Disability is defined as the inability to do any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. 20 CFR 416.905(a) The person claiming a physical or mental disability has the burden to establish it through the use of competent medical evidence from qualified medical sources such as his or her medical history, clinical/laboratory findings, diagnosis/prescribed treatment, prognosis for recovery and/or medical assessment of ability to do work-related activities or ability to reason and make appropriate mental adjustments, if a mental disability is alleged. 20 CFR 413.913 An individual’s subjective pain complaints are not, in and of themselves, sufficient to establish disability. 20 CFR 416.908; 20 CFR 416.929(a) Similarly, conclusory statements by a physician or mental health professional that an individual is disabled or blind, absent supporting medical evidence, is insufficient to establish disability. 20 CFR 416.929(a)

When determining disability, the federal regulations require several factors to be considered including: (1) the location/duration/frequency/intensity of an applicant’s pain; (2)

the type/dosage/effectiveness/side effects of any medication the applicants takes to relieve pain;

(3) any treatment other than pain medication that the applicant has received to relieve pain; and

(4) the effect of the applicant's pain on his or her ability to do basic work activities. 20 CFR 416.929(c)(3) The applicant's pain must be assessed to determine the extent of his or her functional limitation(s) in light of the objective medical evidence presented. 20 CFR 416.929(c)(2)

In order to determine whether or not an individual is disabled, federal regulations require a five-step sequential evaluation process be utilized. 20 CFR 416.920(a)(1) The five-step analysis requires the trier of fact to consider an individual's current work activity; the severity of the impairment(s) both in duration and whether it meets or equals a listed impairment in Appendix 1; residual functional capacity to determine whether an individual can perform past relevant work; and residual functional capacity along with vocational factors (i.e. age, education, and work experience) to determine if an individual can adjust to other work. 20 CFR 416.920(a)(4); 20 CFR 416.945

If an individual is found disabled, or not disabled, at any step, a determination or decision is made with no need evaluate subsequent steps. 20 CFR 416.920(a)(4) If a determination cannot be made that an individual is disabled, or not disabled, at a particular step, the next step is required. 20 CFR 416.920(a)(4) If an impairment does not meet or equal a listed impairment, an individual's residual functional capacity is assessed before moving from step three to step four. 20 CFR 416.920(a)(4); 20 CFR 416.945 Residual functional capacity is the most an individual can do despite the limitations based on all relevant evidence. 20 CFR 945(a)(1) An individual's residual functional capacity assessment is evaluated at both steps four and five. 20 CFR 416.920(a)(4) In determining disability, an individual's functional capacity to perform basic

work activities is evaluated and if found that the individual has the ability to perform basic work activities without significant limitation, disability will not be found. 20 CFR 416.994(b)(1)(iv) In general, the individual has the responsibility to prove disability. 20 CFR 416.912(a) An impairment or combination of impairments is not severe if it does not significantly limit an individual's physical or mental ability to do basic work activities. 20 CFR 416.921(a) The individual has the responsibility to provide evidence of prior work experience; efforts to work; and any other factor showing how the impairment affects the ability to work. 20 CFR 416.912(c)(3)(5)(6)

As outlined above, the first step looks at the individual's current work activity. An individual is not disabled regardless of the medical condition, age, education, and work experience, if the individual is working and the work is a substantial, gainful activity. 20 CFR 416.920(a)(4)(i) In the record presented, the Claimant is not involved in substantial gainful activity and last worked in 2001. The Claimant is not ineligible for disability under Step 1.

The severity of the Claimant's alleged impairment(s) is considered under Step 2. The Claimant bears the burden to present sufficient objective medical evidence to substantiate the alleged disabling impairments. In order to be considered disabled for MA purposes, the impairment must be severe. 20 CFR 916.920(a)(4)(ii); 20 CFR 916.920(b) An impairment, or combination of impairments, is severe if it significantly limits an individual's physical or mental ability to do basic work activities regardless of age, education and work experience. 20 CFR 916.920(a)(4)(ii); 20 CFR 916.920(c) Basic work activities means the abilities and aptitudes necessary to do most jobs. 20 CFR 916.921(b) Examples include:

1. Physical functions such as walking, standing, sitting, lifting, pushing, pulling, reaching, carrying, or handling;
2. Capacities for seeing, hearing, and speaking;

3. Understanding, carrying out, and remembering simple instructions;
4. Use of judgment;
5. Responding appropriately to supervision, co-workers and usual work situations; and
6. Dealing with changes in a routine work setting.

Id. The second step allows for dismissal of a disability claim obviously lacking in medical merit. *Higgs v Bowen*, 880 F2d 860, 862 (CA 6, 1988). The severity requirement may still be employed as an administrative convenience to screen out claims that are totally groundless solely from a medical standpoint. *Id.* at 863 citing *Farris v Sec of Health and Human Services*, 773 F2d 85, 90 n.1 (CA 6, 1985) An impairment qualifies as non-severe only if, regardless of a claimant's age, education, or work experience, the impairment would not affect the claimant's ability to work. *Salmi v Sec of Health and Human Services*, 774 F2d 685, 692 (CA 6, 1985)

In the present case, the Claimant alleges physical disability on the basis of severe asthma, chest pain, coronary artery disease, hypertension, and obesity.

On [REDACTED], the Claimant presented to the hospital with complaints of increased chest pain. A stress test revealed significant stenosis on cardiac catheterization. The chest x-ray showed no acute pulmonary process. An x-ray revealed cardiomegaly with bilateral thoracic opacity. The Claimant underwent a coronary artery bypass graft times two of the left internal mammary artery and was discharged on the [REDACTED].

On [REDACTED], the Claimant was admitted status post incision and drainage. On [REDACTED], the Claimant had coronary artery bypass graft performed with sternal wound debridement and sternal wire removal with wound V.A.C insertion. The Claimant remained intubated after surgery for two days. The Claimant developed extremity cellulites, positive for deep vein

thrombosis. A muscle flap procedure was performed from which the Claimant progressed well. The Claimant was discharged on [REDACTED].

On [REDACTED], the Claimant attended a department ordered evaluation. The Pulmonary Function Studies revealed shortness of breath but with normal lung function with no marked improvement in FEV₁ after bronchodilator. The results of the Pulmonary Function Study revealed a Forced Vital Capacity (“FVC”) for 4 tests as 1.78, 2.21, 2.30, and 2.07 before bronchodilator. The Forced Expiratory Volume at 1 second (“FEV₁”) for each test was 1.48, 1.96, 2.07, and 1.67. The results 10 minutes after the bronchodilator for the FVC were 1.51, 2.27, 2.05, and 2.27 with the FEV₁ at 1.28, 2.02, 1.83, and 2.04.

On [REDACTED], the Claimant presented to the hospital’s emergency room with complaints of chest pain. After evaluation, which found the Claimant with acute chest pain with unstable angina and hypertensive emergency, the Claimant was admitted. A stress test found no evidence of active cardiac ischemia and her blood pressure was controlled with medication. On [REDACTED], the Claimant was discharged with the diagnoses of accelerated hypertension, chest pain, known atherosclerotic coronary artery disease/coronary artery bypass grafting in the past, hyperlipidemia, and obesity. The Claimant’s medication non-compliance due to insurance issues was also noted.

As previously noted, the Claimant bears the burden to present sufficient objective medical evidence to substantiate the alleged disabling impairment(s). As summarized above, the Claimant has presented some medical evidence establishing that she does have some physical limitations on her ability to perform basic work activities. The medical evidence has established that the Claimant has an impairment, or combination thereof, that has more than a *de minimis* effect on the Claimant’s basic work activities. Further, the impairments have lasted continuously

for twelve months; therefore, the Claimant is not disqualified from receipt of MA-P benefits under Step 2.

In the third step of the sequential analysis of a disability claim, the trier of fact must determine if the Claimant's impairment, or combination of impairments, is listed in Appendix 1 of Subpart P of 20 CFR, Part 404. The Claimant has alleged physical disabling impairments due to severe asthma, coronary artery disease, hypertension, and obesity.

Listing 3.00 defines respiratory system impairments. Respiratory disorders, along with any associated impairment(s), must be established by medical evidence sufficient enough in detail to evaluate the severity of the impairment. 3.00A Evidence must be provided in sufficient detail to permit an independent reviewer to evaluate the severity of the impairment. *Id.* A major criteria for determining the level of respiratory impairments that are episodic in nature, is the frequency and intensity of episodes that occur despite prescribed treatment. 3.00C Attacks of asthma, episodes of bronchitis or pneumonia or hemoptysis (more than blood-streaked sputum), or respiratory failure as referred to in paragraph B of 3.03, 3.04, and 3.07, are defined as prolonged symptomatic episodes lasting one or more days and requiring intensive treatment, such as intravenous bronchodilator or antibiotic administration or prolonged inhalational bronchodilator therapy in a hospital, emergency room or equivalent setting. 3.00C Hospital admissions are defined as inpatient hospitalizations for longer than 24 hours. *Id.* Medical evidence must include information documenting adherence to a prescribed regimen of treatment as well as a description of physical signs. *Id.* For asthma, medical evidence should include spirometric results obtained between attacks that document the presence of baseline airflow obstruction. *Id.*

Chronic asthmatic bronchitis (Listing 3.03A) is evaluated under Listing 3.02. Chronic obstructive pulmonary disease, due to any cause, meets Listing 3.02 if medical evidence establishes that the Claimant's forced expiratory volume (in one second) is equal to or less than 1.15 (based on the Claimant's 5'1" height). Attacks of asthma and/or episodes of bronchitis as referred to in 3.03 and 3.07, in spite of prescribed treatment, that occur at least once every 2 months or at least six times a year are considered. Each in-patient hospitalization for longer than 24 hours counts as two attacks/episodes and an evaluation of at least 12 consecutive months must be used to determine the frequency of attacks/episodes. 3.03B; 3.07B For asthma, the medical evidence should include spirometric results obtained between attacks that document the presence of baseline airflow obstruction. 3.00C

In this case, the Pulmonary Function Study ("PFS") document's the Claimant's forced expiratory volume (in one second) as being below Claimant's forced expiratory volume was above 1.15 on all tests. In addition, the record reflects medication non-compliance due to insurance issues. Based on the results of the PFS, as well as the objective medical evidence, it is found that the record is insufficient to establish the episodic nature of the impairment thus the intent and severity requirement of a Listed impairment within 3.00 therefore the Claimant cannot be found disabled, or not disabled, under this listing.

The Claimant also alleged physical disabling impairments based upon coronary artery disease and hypertension. Listing 4.00 defines cardiovascular impairment in part, as follows:

. . . any disorder that affects the proper functioning of the heart or the circulatory system (that is, arteries, veins, capillaries, and the lymphatic drainage). The disorder can be congenital or acquired. Cardiovascular impairment results from one or more of four consequences of heart disease:

- (i) Chronic heart failure or ventricular dysfunction.
- (ii) Discomfort or pain due to myocardial ischemia, with or without necrosis of heart muscle.

- (iii) Syncope, or near syncope, due to inadequate cerebral perfusion from any cardiac cause, such as obstruction of flow or disturbance in rhythm or conduction resulting in inadequate cardiac output.
- (iv) Central cyanosis due to right-to-left shunt, reduced oxygen concentration in the arterial blood, or pulmonary vascular disease.

An uncontrolled impairment means one that does not adequately respond to the standard prescribed medical treatment. 4.00A3f In a situation where an individual has not received ongoing treatment or have an ongoing relationship with the medical community despite the existence of a severe impairment, the disability evaluation is based on the current objective medical evidence. 4.00B3a If an individual does not receive treatment, an impairment that meets the criteria of a listing cannot be established. *Id.* Hypertension (high blood pressure) generally causes disability through its effect on other body systems and is evaluated by reference to specific body system(s) affected (heart, brain, kidneys, or eyes). 4.00H1 Hypertension, to include malignant hypertension, is not a listed impairment under 4.00 thus the effect on the Claimant's other body systems were evaluated by reference to specific body parts. Listing 4.02 discusses chronic heart failure. To meet the required level of severity while on a regimen of prescribed treatment the following must be satisfied:

- A. Medically documented presence of one of the following:
 - 1. Systolic failure (see 4.00D1a(i)), with left ventricular end diastolic dimensions greater than 6.0 cm or ejection fraction of 30 percent or less during a period of stability (not during an episode of acute heart failure); or
 - 2. Diastolic failure (see 4.00D1a(ii)), with left ventricular posterior wall plus septal thickness totaling 2.5 cm or greater on imaging, with an enlarged left atrium greater than or equal to 4.5 cm, with normal or elevated ejection fraction during a period of stability (not during an episode of acute heart failure);

AND

- B. Resulting in one of the following:

1. Persistent symptoms of heart failure which very seriously limit the ability to independently initiate, sustain, or complete activities of daily living in an individual for whom an MC, preferably one experienced in the care of patients with cardiovascular disease, has concluded that the performance of an exercise test would present a significant risk to the individual; or
2. Three or more separate episodes of acute congestive heart failure within a consecutive 12-month period (see 4.00A3e), with evidence of fluid retention (see 4.00D2b (ii)) from clinical and imaging assessments at the time of the episodes, requiring acute extended physician intervention such as hospitalization or emergency room treatment for 12 hours or more, separated by periods of stabilization (see 4.00D4c); or
3. Inability to perform on an exercise tolerance test at a workload equivalent to 5 METs or less due to:
 - a. Dyspnea, fatigue, palpitations, or chest discomfort; or
 - b. Three or more consecutive premature ventricular contractions (ventricular tachycardia), or increasing frequency of ventricular ectopy with at least 6 premature ventricular contractions per minute; or
 - c. Decrease of 10 mm Hg or more in systolic pressure below the baseline systolic blood pressure or the preceding systolic pressure measured during exercise (see 4.00D4d) due to left ventricular dysfunction, despite an increase in workload; or
 - d. Signs attributable to inadequate cerebral perfusion, such as ataxic gait or mental confusion.

Listing 4.04 discusses ischemic heart disease. If an individual does not receive treatment, an impairment is not found however, disability may be found if another impairment in combination with the cardiovascular impairment medically equals the severity of a listed impairment or based on consideration of the individual's residual functional capacity and age, education, and work experience. 4.00B3 To meet the severity requirement of Listing 4.04 while on prescribed treatment, one of the following must be met:

- A. Sign- or symptom-limited exercise tolerance test demonstrating at least one of the following manifestations at a workload equivalent to 5 METs or less:
1. Horizontal or downsloping depression, in the absence of digitalis glycoside treatment or hypokalemia, of the ST segment of at least -0.10 millivolts (-1.0 mm) in at least 3 consecutive complexes that are on a level baseline in any lead other than a VR, and depression of at least -0.10 millivolts lasting for at least 1 minute of recovery; or
 2. At least 0.1 millivolt (1 mm) ST elevation above resting baseline in non-infarct leads during both exercise and 1 or more minutes of recovery; or
 3. Decrease of 10 mm Hg or more in systolic pressure below the baseline blood pressure or the preceding systolic pressure measured during exercise (see 4.00E9e) due to left ventricular dysfunction, despite an increase in workload; or
 4. Documented ischemia at an exercise level equivalent to 5 METs or less on appropriate medically acceptable imaging, such as radionuclide perfusion scans or stress echocardiography.

OR

- B. Three separate ischemic episodes, each requiring revascularization or not amenable to revascularization (see 4.00E9f), within a consecutive 12-month period (see 4.00A3e).

OR

- C. Coronary artery disease, demonstrated by angiography (obtained independent of Social Security disability evaluation) or other appropriate medically acceptable imaging, and in the absence of a timely exercise tolerance test or a timely normal drug-induced stress test, an MC, preferably one experienced in the care of patients with cardiovascular disease, has concluded that performance of exercise tolerance testing would present a significant risk to the individual, with both 1 and 2:
1. Angiographic evidence showing:
 - a. 50 percent or more narrowing of a nonbypassed left main coronary artery; or

- b. 70 percent or more narrowing of another nonbypassed coronary artery; or
 - c. 50 percent or more narrowing involving a long (greater than 1 cm) segment of a nonbypassed coronary artery; or
 - d. 50 percent or more narrowing of at least two nonbypassed coronary arteries; or
 - e. 70 percent or more narrowing of a bypass graft vessel; and
2. Resulting in very serious limitations in the ability to independently initiate, sustain, or complete activities of daily living.

Listing 4.05 defines recurrent arrhythmias, not related to reversible causes such as electrolyte abnormalities or digitalis glycoside or antiarrhythmic drug toxicity, resulting in uncontrolled, recurrent episodes of cardiac syncope or near syncope (see 4.00F3b), despite prescribed treatment (see 4.00B3 if there is no prescribed treatment), and documented by resting or ambulatory (Holter) electrocardiography, or by other appropriate medically acceptable testing, coincident with the occurrence of syncope or near syncope.

In the record presented, the Claimant had double bypass surgery in March of 2008 without severe complications. The record documents the Claimant's hypertension which was, at one point, uncontrolled due to medication noncompliance. Ultimately, based upon the objective findings, the Claimant's impairment does not meet the intent or severity requirement of a listed impairment within 4.00 therefore she cannot be found disabled under this listing.

On August 24, 1999, the Social Security Administration deleted Listing 9.09 regarding obesity from the Listing of Impairments. SSR 02-1p In conjunction, the final rule in the Federal Register deleting 9.09, added paragraphs to the prefaces of the musculoskeletal, respiratory, and cardiovascular body system listings that provide guidance regarding the potential effects obesity has in causing or contributing to impairments in those body systems. *Id.* Obesity affects the

cardiovascular and respiratory systems because of the increased workload the additional body mass places on these systems. *Id.* Therefore, when determining whether an individual with obesity has a listing-level impairment or combination of impairments (and when assessing a claim at other steps of the sequential evaluation process, including when assessing an individual's residual functional capacity) any additional and cumulative effects of obesity is considered. *Id.* The National Institute of Health (NIH) established medical criteria for the diagnosis of obesity in its *Clinical Guidelines on the Identification, Evaluation, and Treatment of Overweight and Obesity in Adults* (NIH Publication No. 98-4083, September 1998). SSR 02-1p These guidelines classify overweight and obesity in adults according to Body Mass Index ("BMI") which is the ratio of an individual's weight in kilograms to the square of his/her height in meters. *Id.* For adults, the *Clinical Guidelines* describe a BMI of 25-29.9 as "overweight" with obesity being 30.0 or above. *Id.* The guidelines recognize three levels of obesity. Level I includes BMIs of 30.0-34.9; Level 2 includes BMIs of 35.0-39.9; and Level 3 (termed "extreme" obesity) includes BMIs of 40.0 or above. *Id.*

In the record presented, the objective medical records documents the Claimant's obesity, which based on the Claimant's current weight, is at Level 3. That being stated, and inconsideration of the Claimant's other impairments, it is found that the Claimant's obesity along with her other impairments fail to meet the intent and severity of the Listings, or the equivalent thereof, therefore the Claimant cannot be found disabled, or not disabled at Step 3. Accordingly, the Claimant's eligibility is considered under Step 4. 20 CFR 416.905(a)

The fourth step in analyzing a disability claim requires an assessment of the Claimant's residual functional capacity ("RFC") and past relevant employment. 20 CFR 416.920(a)(4)(iv) An individual is not disabled if he/she can perform past relevant work. *Id.*; 20 CFR

416.960(b)(3) Past relevant work is work that has been performed within the past 15 years that was a substantial gainful activity and that lasted long enough for the individual to learn the position. 20 CFR 416.960(b)(1) Vocational factors of age, education, and work experience, and whether the past relevant employment exists in significant numbers in the national economy is not considered. 20 CFR 416.960(b)(3) RFC is assessed based on impairment(s), and any related symptoms, such as pain, which may cause physical and mental limitations that affect what can be done in a work setting. RFC is the most that can be done, despite the limitations.

To determine the physical demands (exertional requirements) of work in the national economy, jobs are classified as sedentary, light, medium, heavy, and very heavy. 20 CFR 416.967 Sedentary work involves lifting of no more than 10 pounds at a time and occasionally lifting or carrying articles like docket files, ledgers, and small tools. 20 CFR 416.967(a) Although a sedentary job is defined as one which involves sitting, a certain amount of walking and standing is often necessary in carrying out job duties. *Id.* Jobs are sedentary if walking and standing are required occasionally and other sedentary criteria are met. Light work involves lifting no more than 20 pounds at a time with frequent lifting or carrying objects weighing up to 10 pounds. 20 CFR 416.967(b) Even though weight lifted may be very little, a job is in this category when it requires a good deal of walking or standing, or when it involves sitting most of the time with some pushing and pulling of arm or leg controls. *Id.* To be considered capable of performing a full or wide range of light work, an individual must have the ability to do substantially all of these activities. *Id.* An individual capable of light work is also capable of sedentary work, unless there are additionally limiting factors such as loss of fine dexterity or inability to sit for long periods of time. *Id.* Medium work involves lifting no more than 50 pounds at a time with frequent lifting or carrying of objects weighing up to 25 pounds. 20 CFR

416.967(c) An individual capable of performing medium work is also capable of light and sedentary work. *Id.* Heavy work involves lifting no more than 100 pounds at a time with frequent lifting or carrying of objects weighing up to 50 pounds. 20 CFR 416.967(d) An individual capable of heavy work is also capable of medium, light, and sedentary work. *Id.* Finally, very heavy work involves lifting objects weighing more than 100 pounds at a time with frequent lifting or carrying objects weighing 50 pounds or more. 20 CFR 416.967(e) An individual capable of very heavy work is able to perform work under all categories. *Id.*

Limitations or restrictions which affect the ability to meet the demands of jobs other than strength demands (exertional requirements, i.e. sitting, standing, walking, lifting, carrying, pushing, or pulling) are considered nonexertional. 20 CFR 416.969a(a) In considering whether an individual can perform past relevant work, a comparison of the individual's residual functional capacity with the demands of past relevant work. *Id.* If an individual can no longer do past relevant work the same residual functional capacity assessment along with an individual's age, education, and work experience is considered to determine whether an individual can adjust to other work which exists in the national economy. *Id.* Examples of non-exertional limitations or restrictions include difficulty function due to nervousness, anxiousness, or depression; difficulty maintaining attention or concentration; difficulty understanding or remembering detailed instructions; difficulty in seeing or hearing; difficulty tolerating some physical feature(s) of certain work settings (i.e. can't tolerate dust or fumes); or difficulty performing the manipulative or postural functions of some work such as reaching, handling, stooping, climbing, crawling, or crouching. 20 CFR 416.969a(c)(1)(i) – (vi) If the impairment(s) and related symptoms, such as pain, only affect the ability to perform the non-exertional aspects of work-related activities, the rules in Appendix 2 do not direct factual

conclusions of disabled or not disabled. 20 CFR 416.969a(c)(2) The determination of whether disability exists is based upon the principles in the appropriate sections of the regulations, giving consideration to the rules for specific case situations in Appendix 2. *Id.*

The Claimant's prior work history includes employment as a caregiver, shift supervisor, and grocery store clerk. In light of the Claimant's testimony and in consideration of the Occupational Code, the Claimant's prior work as a care giver and grocery store clerk is classified as unskilled, light work. The Claimant's employment as a shift supervisor is considered semi-skilled, light work.

The Claimant testified that she can difficulty lift/carry approximately 5 to 10 pounds; can stand for 10 minutes; can walk ½ block; can sit for 20 minutes; and experiences difficulty when squatting and/or bending. On [REDACTED], the Claimant completed the Activities of Daily Living form which stated that the she was able to do laundry, vacuum, wash dishes, dust, mop, cook, pay bills, grocery shop, and was a "chore" provider from mom. The Claimant performed these activities on a weekly basis without assistance. If the impairment or combination of impairments does not limit physical or mental ability to do basic work activities, it is not a severe impairment(s) and disability does not exist. 20 CFR 416.920 In consideration of the Claimant's testimony, medical records, and current limitations, it is found that the Claimant is not able to return to past relevant work providing thus the fifth step in the sequential evaluation is required.

In Step 5, an assessment of the individual's residual functional capacity and age, education, and work experience is considered to determine whether an adjustment to other work can be made. 20 CFR 416.920(4)(v) At the time of hearing, the Claimant, a high school graduate, was 53 years old thus considered to be closely approaching advanced age for MA-P purposes. Disability is found disabled if an individual is unable to adjust to other work. *Id.* At

this point in the analysis, the burden shifts from the Claimant to the Department to present proof that the Claimant has the residual capacity to substantial gainful employment. 20 CFR 416.960(2); *Richardson v Sec of Health and Human Services*, 735 F2d 962, 964 (CA 6, 1984). While a vocational expert is not required, a finding supported by substantial evidence that the individual has the vocational qualifications to perform specific jobs is needed to meet the burden. *O'Banner v Sec of Health and Human Services*, 587 F2d 321, 323 (CA 6, 1978). Medical-Vocational guidelines found at 20 CFR Subpart P, Appendix II, may be used to satisfy the burden of proving that the individual can perform specific jobs in the national economy. *Heckler v Campbell*, 461 US 458, 467 (1983); *Kirk v Secretary*, 667 F2d 524, 529 (CA 6, 1981) *cert den* 461 US 957 (1983).

In the record presented, the Claimant's residual functional capacity for work activities on a regular and continuing basis does include the ability to meet at least the physical and mental demands required to perform sedentary work. As noted above, sedentary work involves sitting and lifting no more than 10 pounds at time with occasional walking and standing to carry out the job duties. After review of the entire record and using the Medical-Vocational Guidelines [20 CFR 404, Subpart P, Appendix II] as a guide, specifically Rule 201.15, it is found that the Claimant is not disabled for purposes of the MA-P program.

The State Disability Assistance ("SDA") program, which provides financial assistance for disabled persons, was established by 2004 PA 344. DHS administers the SDA program pursuant to MCL 400.10 *et seq.* and Michigan Administrative Code ("MAC R") 400.3151 – 400.3180. Department policies are found in PAM, PEM, and PRM. A person is considered disabled for SDA purposes if the person has a physical or mental impairment which meets federal SSI disability standards for at least ninety days. PEM 261, p. 1 Receipt of SSI or RSDI

benefits based on disability or blindness, or the receipt of MA benefits based on disability or blindness (MA-P) automatically qualifies an individual as disabled for purposes of the SDA program. PEM 261, pp 1 – 2

In this case, there is insufficient evidence to support a finding that the Claimant's impairment has disabled her under the SSI disability standards. Accordingly, it is found that the Claimant is not disabled for purposes of the SDA program.

DECISION AND ORDER

The Administrative Law Judge, based upon the findings of fact and conclusions of law, finds the Claimant NOT disabled for purposes of the Medical Assistance and State Disability Assistance programs.

It is ORDERED:

The Department's determination is AFFIRMED.
