

STATE OF MICHIGAN  
STATE OFFICE OF ADMINISTRATIVE HEARINGS AND RULES

ADMINISTRATIVE HEARINGS FOR THE  
DEPARTMENT OF HUMAN SERVICES

IN THE MATTER OF: [REDACTED],

Claimant

Reg. No.: 2009-6737  
Issue No.: 2009, 4031  
Case No.: [REDACTED]  
Load No.: [REDACTED]  
Hearing Date:  
February 2, 2009  
Wayne County DHS [REDACTED]

ADMINISTRATIVE LAW JUDGE: Colleen M. Mamelka

HEARING DECISION

This matter is before the undersigned Administrative Law Judge pursuant to MCL 400.9 and MCL 400.37 upon the Claimant's request for a hearing. After due notice, a hearing was held in Redford, Michigan on February 2, 2009. The Claimant appeared and testified. The Claimant was represented by [REDACTED]. [REDACTED] appeared on behalf of the Department.

At the Claimant's request, the record was extended to allow for the submission of an updated Medical Examination Report. The record was received and reviewed. This matter is now before the undersigned for a final decision.

ISSUE

Whether the Department properly determined that the Claimant was not disabled for purposes of Medical Assistance ("MA-P"), Retro MA-P, and State Disability Assistance ("SDA") programs.

FINDINGS OF FACT

The Administrative Law Judge, based on the competent, material and substantial evidence on the whole record, finds as material fact:

1. The Claimant submitted a public assistance application seeking MA-P, Retro MA-P and SDA benefits on September 11, 2008.
2. On September 18, 2008, the Medical Review Team (“MRT”) determined the Claimant was not disabled finding the Claimant capable of performing other work for MA-P purposes. (Exhibit 1, 2)
3. On September 19<sup>th</sup>, the Department sent the Claimant an Eligibility Notice informing the Claimant that he was found to be not disabled.
4. On November 19, 2008, the Department received the Claimant’s Request for Hearing protesting the Department’s determination.
5. On December 28, 2008, the State Hearing Review Team (“SHRT”) found the Claimant not disabled. (Exhibit 2, pp. 1, 2)
6. The Claimant’s alleged disabling impairments are due to uncontrolled high blood pressure, an enlarged heart, dizziness, headaches, back pain, arthritis, and gout.
7. At the time of hearing, the Claimant was 55 years old with a [REDACTED] birth date; was 5’ 9” and weighed 217 pounds.
8. The Claimant completed through the 8<sup>th</sup> grade and has a work history as a tow truck driver.
9. The Claimant’s impairments have lasted, or are expected to last, for a period of 12-months or longer.

CONCLUSIONS OF LAW

The Medical Assistance (“MA”) program is established by Subchapter XIX of Chapter 7 of The Public Health & Welfare Act, 42 USC 1397, and is administered by the Department of Human Services (“DHS”), formally known as the Family Independence Agency, pursuant to MCL 400.10 *et seq* and MCL 400.105. Department policies are found in the Program Administrative Manual (“PAM”), the Program Eligibility Manual (“PEM”), and the Program Reference Manual (“PRM”).

Disability is defined as the inability to do any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. 20 CFR 416.905(a) The person claiming a physical or mental disability has the burden to establish it through the use of competent medical evidence from qualified medical sources such as his or her medical history, clinical/laboratory findings, diagnosis/prescribed treatment, prognosis for recovery and/or medical assessment of ability to do work-related activities or ability to reason and make appropriate mental adjustments, if a mental disability is alleged. 20 CFR 413.913 An individual’s subjective pain complaints are not, in and of themselves, sufficient to establish disability. 20 CFR 416.908; 20 CFR 416.929(a) Similarly, conclusory statements by a physician or mental health professional that an individual is disabled or blind, absent supporting medical evidence, is insufficient to establish disability. 20 CFR 416.929(a)

When determining disability, the federal regulations require several factors to be considered including: (1) the location/duration/frequency/intensity of an applicant’s pain; (2) the type/dosage/effectiveness/side effects of any medication the applicants takes to relieve pain; (3) any treatment other than pain medication that the applicant has received to relieve pain; and

(4) the effect of the applicant's pain on his or her ability to do basic work activities. 20 CFR 416.929(c)(3) The applicant's pain must be assessed to determine the extent of his or her functional limitation(s) in light of the objective medical evidence presented. 20 CFR 416.929(c)(2)

In order to determine whether or not an individual is disabled, federal regulations require a five-step sequential evaluation process be utilized. 20 CFR 416.920(a)(1) The five-step analysis requires the trier of fact to consider an individual's current work activity; the severity of the impairment(s) both in duration and whether it meets or equals a listed impairment in Appendix 1; residual functional capacity to determine whether an individual can perform past relevant work; and residual functional capacity along with vocational factors (i.e. age, education, and work experience) to determine if an individual can adjust to other work. 20 CFR 416.920(a)(4); 20 CFR 416.945

If an individual is found disabled, or not disabled, at any step, a determination or decision is made with no need evaluate subsequent steps. 20 CFR 416.920(a)(4) If a determination cannot be made that an individual is disabled, or not disabled, at a particular step, the next step is required. 20 CFR 416.920(a)(4) If an impairment does not meet or equal a listed impairment, an individual's residual functional capacity is assessed before moving from step three to step four. 20 CFR 416.920(a)(4); 20 CFR 416.945 Residual functional capacity is the most an individual can do despite the limitations based on all relevant evidence. 20 CFR 945(a)(1) An individual's residual functional capacity assessment is evaluated at both steps four and five. 20 CFR 416.920(a)(4) In determining disability, an individual's functional capacity to perform basic work activities is evaluated and if found that the individual has the ability to perform basic work activities without significant limitation, disability will not be found. 20 CFR 416.994(b)(1)(iv)

In general, the individual has the responsibility to prove disability. 20 CFR 416.912(a) An impairment or combination of impairments is not severe if it does not significantly limit an individual's physical or mental ability to do basic work activities. 20 CFR 416.921(a) As outlined above, the first step looks at the individual's current work activity. An individual is not disabled regardless of the medical condition, age, education, and work experience, if the individual is working and the work is a substantial, gainful activity. 20 CFR 416.920(a)(4)(i) The individual has the responsibility to provide evidence of prior work experience; efforts to work; and any other factor showing how the impairment affects the ability to work. 20 CFR 416.912(c)(3)(5)(6)

As previously stated, the first step looks at the individual's current work activity. An individual is not disabled regardless of the medical condition, age, education, and work experience, if the individual is working and the work is a substantial, gainful activity. 20 CFR 416.920(a)(4)(i) In the record presented, the Claimant is not involved in substantial gainful activity and last worked in 2001. The Claimant is not disqualified from receipt of disability benefits under Step 1.

The severity of the Claimant's alleged impairment(s) is considered under Step 2. The Claimant bears the burden to present sufficient objective medical evidence to substantiate the alleged disabling impairments. In order to be considered disabled for MA purposes, the impairment must be severe. 20 CFR 916.920(a)(4)(ii); 20 CFR 916.920(b) An impairment, or combination of impairments, is severe if it significantly limits an individual's physical or mental ability to do basic work activities regardless of age, education and work experience. 20 CFR 916.920(a)(4)(ii); 20 CFR 916.920(c) Basic work activities means the abilities and aptitudes necessary to do most jobs. 20 CFR 916.921(b) Examples include:

1. Physical functions such as walking, standing, sitting, lifting, pushing, pulling, reaching, carrying, or handling;
2. Capacities for seeing, hearing, and speaking;
3. Understanding, carrying out, and remembering simple instructions;
4. Use of judgment;
5. Responding appropriately to supervision, co-workers and usual work situations; and
6. Dealing with changes in a routine work setting.

*Id.* The second step allows for dismissal of a disability claim obviously lacking in medical merit. *Higgs v Bowen*, 880 F2d 860, 862 (CA 6, 1988). The severity requirement may still be employed as an administrative convenience to screen out claims that are totally groundless solely from a medical standpoint. *Id.* at 863 citing *Farris v Sec of Health and Human Services*, 773 F2d 85, 90 n.1 (CA 6, 1985) An impairment qualifies as severe only if, regardless of a claimant's age, education, or work experience, the impairment would not affect the claimant's ability to work. *Salmi v Sec of Health and Human Services*, 774 F2d 685, 692 (CA 6, 1985)

In the present case, the Claimant alleges disability on the basis of uncontrolled hypertension, an enlarged heart, dizziness, headaches, back pain, arthritis, and gout.

On [REDACTED], the Claimant was admitted to [REDACTED] after complaints of a headache and weakness in the lower extremities. The Claimant's high blood pressure was noted as well as the Claimant's compliance with prescribed treatment for his hypertension and diabetes mellitus. An electrocardiogram revealed sinus bradycardia, first degree AV block. The 2-D echocardiogram documented an ejection fraction of 55% with mild left ventricular hypertrophy with slightly dilated left atrium and normal left ventricular wall

motion. The Claimant was discharged on [REDACTED] [REDACTED] in stable condition with the principal diagnoses of hypertensive urgency, diabetes mellitus type 2, and acute and chronic renal failure. The Claimant was instructed to regularly follow-up at the [REDACTED] as well as with a neurologist.

On [REDACTED], the Claimant presented to [REDACTED] emergency room due to complaints of elevated blood pressure. The Claimant's high blood pressure was noted as difficult to control even in light of the Claimant's compliance with his medication. During the course of the hospitalization, the Claimant's medications were evaluated along with the effects on other body functions. The Claimant's diabetes was "not well controlled during the hospitalization." The Claimant was discharged on [REDACTED] [REDACTED] with a primary diagnosis of hypertensive urgency. Secondary diagnoses were listed as primary parathyroidism, diabetes, and chronic kidney disease. The Claimant was instructed to follow-up with his primary care physician and with an endocrinologist.

On [REDACTED], the Claimant was treated at [REDACTED] due to complaints of right hand pain and swelling. X-rays demonstrated degenerative joint disease. The Claimant was treated with Vicodin and discharged in fair condition.

On [REDACTED], the Claimant's treating physician submitted a Medical Examination Report on the Claimant's behalf. The Claimant's current diagnoses included hypertension, hyperlipidemia, and diabetes mellitus. The Claimant's condition was stable however he was limited to lifting and carrying of less than 10 pounds with no pushing and/or pulling; unable to operate foot/leg controls; and could stand and/or walk less than 2 hours in an 8-hour workday with sitting less than 6 hours during this same period. The Claimant requires assistance with housekeeping, shopping, and laundry.

As previously noted, the Claimant bears the burden to present sufficient objective medical evidence to substantiate the alleged disabling impairment(s). As summarized above, the Claimant has presented some objective medical evidence establishing that he does have some physical limitations on his ability to perform basic work activities. Accordingly, the Claimant has an impairment, or combination thereof, that has more than a *de minimis* effect on the Claimant's basic work activities. Further, the impairments have lasted, or are expected to last, continuously for a twelve month period; therefore, the Claimant is not disqualified from receipt of MA-P benefits under Step 2.

In the third step of the sequential analysis of a disability claim, the trier of fact must determine if the Claimant's impairment, or combination of impairments, is listed in Appendix 1 of Subpart P of 20 CFR, Part 404. The Claimant has alleged physical disabling impairments due, in part, to back and hand pain, and gout. Appendix I, Listing of Impairments, discusses the analysis and criteria necessary to support a finding of a listed impairment. Listing 1.00 defines musculoskeletal system impairments. Disorders of the musculoskeletal system may result from hereditary, congenital, or acquired pathologic processes. 1.00A Impairments may result from infectious, inflammatory, or degenerative processes, traumatic or developmental events, or neoplastic, vascular, or toxic/metabolic diseases. 1.00A Regardless of the cause(s) of a musculoskeletal impairment, functional loss for purposes of these listings is defined as the inability to ambulate effectively on a sustained basis for any reason, including pain associated with the underlying musculoskeletal impairment, or the inability to perform fine and gross movements effectively on a sustained basis for any reason, including pain associated with the underlying musculoskeletal impairment. Inability to ambulate effectively means an extreme limitation of the ability to walk; i.e., an impairment(s) that interferes very seriously with the

individual's ability to independently initiate, sustain, or complete activities. 1.00B2b (1) Ineffective ambulation is defined generally as having insufficient lower extremity function to permit independent ambulation without the use of a hand-held assistive device(s) that limits the functioning of both upper extremities. (Listing 1.05C is an exception to this general definition because the individual has the use of only one upper extremity due to amputation of a hand.) *Id.* To ambulate effectively, individuals must be capable of sustaining a reasonable walking pace over a sufficient distance to be able to carry out activities of daily living. 1.00B2b (2) They must have the ability to travel without companion assistance to and from a place of employment or school. . . . *Id.* When an individual's impairment involves a lower extremity uses a hand-held assistive device, such as a cane, crutch or walker, the medical basis for use of the device should be documented. 1.00J4 The requirement to use a hand-held assistive device may also impact an individual's functional capacity by virtue of the fact that one or both upper extremities are not available for such activities as lifting, carrying, pushing, and pulling. *Id.*

Categories of Musculoskeletal include:

- 1.02 Major dysfunction of a joint(s) due to any cause: Characterized by gross anatomical deformity (e.g. subluxation, contracture, bony or fibrous ankylosis, instability) and chronic joint pain and stiffness with signs of limitation of motion or other abnormal motion of the affected joint(s), and findings on appropriate medically acceptable imaging of joint space narrowing, bony destruction, or ankylosis of the affected joint(s). With:
- A. Involvement of one major peripheral weight-bearing joint (i.e., hip, knee, or ankle), resulting in inability to ambulate effectively as defined in 1.00B2b; or
  - B. Involvement of one major peripheral joint in each upper extremity (i.e., shoulder, elbow, wrist, hand), resulting in inability to perform fine and gross movements effectively a defined in 1.00B2c

The inability to perform fine and gross movements effectively means that the impairment(s) interferes very seriously with the individual's ability to independently initiate,

sustain, or complete activities. 1.00B2c To use upper extremities effectively, an individual must be capable of sustaining functions such as reaching, pushing, pulling, grasping, and fingering to be able to carry out activities of daily living. *Id.*

\* \* \*

- 1.04 Disorders of the spine (e.g., herniated nucleus pulposus, spinal arachnoiditis, spinal stenosis, osteoarthritis, degenerative disc disease, facet arthritis, and vertebral fracture), resulting in compromise of a nerve root (including the cauda equine) or spinal cord. With:
- A. Evidence of nerve root compression characterized by neuro-anatomic distribution of pain, limitation of motion of the spine, motor loss (atrophy with associated muscle weakness or muscle weakness) accompanied by sensory or reflex loss and, if there is involvement of the lower back, positive straight-leg raising test (sitting and supine); or
  - B. Spinal arachnoiditis, confirmed by an operative note or pathology report of tissue biopsy, or by appropriate medically acceptable imaging, manifested by severe burning or painful dysesthesia, resulting in the need for changes in position or posture more than once every 2 hours; or
  - C. Lumbar spinal stenosis resulting in pseudoclaudication, established by findings on appropriate medically acceptable imaging, manifested by chronic nonradicular pain and weakness, and resulting in inability to ambulate effectively, as defined in 1.00B2b. (see above definition)

Based upon the submitted medical documentation, there was insufficient evidence presented to supporting a finding of a listed impairment within Listing 1.00, specifically 1.02 and/or 1.04 therefore the Claimant is not disabled under this Listing

The Claimant has alleged disabling physical impairments due to an enlarged heart, uncontrolled hypertension, diabetes, dizziness and headaches. Listing 4.00 defines cardiovascular impairment in part, as follows:

. . . any disorder that affects the proper functioning of the heart or the circulatory system (that is, arteries, veins, capillaries, and the lymphatic drainage). The disorder can be congenital or acquired. Cardiovascular impairment results from one or more of four consequences of heart disease:

- (i) Chronic heart failure or ventricular dysfunction.
- (ii) Discomfort or pain due to myocardial ischemia, with or without necrosis of heart muscle.
- (iii) Syncope, or near syncope, due to inadequate cerebral perfusion from any cardiac cause, such as obstruction of flow or disturbance in rhythm or conduction resulting in inadequate cardiac output.
- (iv) Central cyanosis due to right-to-left shunt, reduced oxygen concentration in the arterial blood, or pulmonary vascular disease.

An uncontrolled impairment means one that does not adequately respond to the standard prescribed medical treatment. 4.00A3f In a situation where an individual has not received ongoing treatment or have an ongoing relationship with the medical community despite the existence of a severe impairment, the disability evaluation is based on the current objective medical evidence. 4.00B3a If an individual does not receive treatment, an impairment that meets the criteria of a listing cannot be established. *Id.* Hypertension (high blood pressure) generally causes disability through its effect on other body systems and is evaluated by reference to specific body system(s) affected (heart, brain, kidneys, or eyes). 4.00H1 Hypertension, to include malignant hypertension, is not a listed impairment under 4.00 thus the effect on the Claimant's other body systems were evaluated by reference to specific body parts. Cardiomyopathy is evaluated under 4.02, 4.04, 4.05 or 11.04 depending on its effects on the individual. 4.00H3

Listing 4.02 discusses chronic heart failure. To meet the required level of severity while on a regimen of prescribed treatment the following must be satisfied:

- A. Medically documented presence of one of the following:
  - 1. Systolic failure (see 4.00D1a(i)), with left ventricular end diastolic dimensions greater than 6.0 cm or ejection fraction of 30 percent or less during a period of stability (not during an episode of acute heart failure); or
  - 2. Diastolic failure (see 4.00D1a(ii)), with left ventricular posterior wall plus septal thickness totaling 2.5 cm or greater on imaging, with an enlarged left atrium

greater than or equal to 4.5 cm, with normal or elevated ejection fraction during a period of stability (not during an episode of acute heart failure);

**AND**

B. Resulting in one of the following:

1. Persistent symptoms of heart failure which very seriously limit the ability to independently initiate, sustain, or complete activities of daily living in an individual for whom an MC, preferably one experienced in the care of patients with cardiovascular disease, has concluded that the performance of an exercise test would present a significant risk to the individual; or
2. Three or more separate episodes of acute congestive heart failure within a consecutive 12-month period (see 4.00A3e), with evidence of fluid retention (see 4.00D2b (ii)) from clinical and imaging assessments at the time of the episodes, requiring acute extended physician intervention such as hospitalization or emergency room treatment for 12 hours or more, separated by periods of stabilization (see 4.00D4c); or
3. Inability to perform on an exercise tolerance test at a workload equivalent to 5 METs or less due to:
  - a. Dyspnea, fatigue, palpitations, or chest discomfort; or
  - b. Three or more consecutive premature ventricular contractions (ventricular tachycardia), or increasing frequency of ventricular ectopy with at least 6 premature ventricular contractions per minute; or
  - c. Decrease of 10 mm Hg or more in systolic pressure below the baseline systolic blood pressure or the preceding systolic pressure measured during exercise (see 4.00D4d) due to left ventricular dysfunction, despite an increase in workload; or
  - d. Signs attributable to inadequate cerebral perfusion, such as ataxic gait or mental confusion.

Listing 4.04 discusses ischemic heart disease. If an individual does not receive treatment, impairment is not found however, disability may be found if another impairment in combination with the cardiovascular impairment medically equals the severity of a listed impairment or based on consideration of the individual's residual functional capacity and age, education, and work

experience. 4.00B3 To meet the severity requirement of Listing 4.04 while on prescribed treatment, one of the following must be met:

A. Sign- or symptom-limited exercise tolerance test demonstrating at least one of the following manifestations at a workload equivalent to 5 METs or less:

1. Horizontal or down sloping depression, in the absence of digitalis glycoside treatment or hypokalemia, of the ST segment of at least -0.10 millivolts (-1.0 mm) in at least 3 consecutive complexes that are on a level baseline in any lead other than a VR, and depression of at least -0.10 millivolts lasting for at least 1 minute of recovery; or
2. At least 0.1 millivolt (1 mm) ST elevation above resting baseline in non-infarct leads during both exercise and 1 or more minutes of recovery; or
3. Decrease of 10 mm Hg or more in systolic pressure below the baseline blood pressure or the preceding systolic pressure measured during exercise (see 4.00E9e) due to left ventricular dysfunction, despite an increase in workload; or
4. Documented ischemia at an exercise level equivalent to 5 METs or less on appropriate medically acceptable imaging, such as radionuclide perfusion scans or stress echocardiography.

**OR**

B. Three separate ischemic episodes, each requiring revascularization or not amenable to revascularization (see 4.00E9f), within a consecutive 12-month period (see 4.00A3e).

**OR**

C. Coronary artery disease, demonstrated by angiography (obtained independent of Social Security disability evaluation) or other appropriate medically acceptable imaging, and in the absence of a timely exercise tolerance test or a timely normal drug-induced stress test, an MC, preferably one experienced in the care of patients with cardiovascular disease, has concluded that performance of exercise tolerance testing would present a significant risk to the individual, with both 1 and 2:

1. Angiographic evidence showing:
  - a. 50 percent or more narrowing of a non-bypassed left main coronary artery; or
  - b. 70 percent or more narrowing of another non-bypassed coronary artery; or

- c. 50 percent or more narrowing involving a long (greater than 1 cm) segment of a non-bypassed coronary artery; or
  - d. 50 percent or more narrowing of at least two non-bypassed coronary arteries; or
  - e. 70 percent or more narrowing of a bypass graft vessel; and
2. Resulting in very serious limitations in the ability to independently initiate, sustain, or complete activities of daily living.

Listing 4.05 defines recurrent arrhythmias, not related to reversible causes such as electrolyte abnormalities or digitalis glycoside or antiarrhythmic drug toxicity, resulting in uncontrolled, recurrent episodes of cardiac syncope or near syncope (see 4.00F3b), despite prescribed treatment (see 4.00B3 if there is no prescribed treatment), and documented by resting or ambulatory (Holter) electrocardiography, or by other appropriate medically acceptable testing, coincident with the occurrence of syncope or near syncope.

Listing 11.04 defines central nervous vascular accident (“CVS”) and requires one or the following more than 3 months post-vascular accident:

- A. Sensory or motor aphasia resulting in ineffective speech or communication; or
- B. Significant and persistent disorganization of motor function in two extremities, resulting in sustained disturbance of gross and dexterous movements, or gait and station (see 11.00C).

In the record presented, the Claimant was diagnosed with cardiomegaly [enlargement of the heart], diabetes, and hypertension. The Claimant’s medical record is insufficient to meet the severity requirements of a listing within Listing 4.00. The record does not support a finding that the Claimant’s physical impairment(s) are “listed impairments” or equivalent to a listed impairment detailed above. 20 CFR 416.920(a)(4)(iii) According to the medical evidence alone, the Claimant’s physical impairment(s) do not meet or equal the requirements within Listing 4.00

thus he cannot be found to be disabled for purposes of the Medical Assistance program. The Claimant's eligibility under Step 4 is considered. 20 CFR 416.905(a)

The fourth step in analyzing a disability claim requires an assessment of the Claimant's residual functional capacity ("RFC") and past relevant employment. 20 CFR 416.920(a)(4)(iv) An individual is not disabled if he/she can perform past relevant work. *Id.*; 20 CFR 416.960(b)(3) Past relevant work is work that has been performed within the past 15 years that was a substantial gainful activity and that lasted long enough for the individual to learn the position. 20 CFR 416.960(b)(1) Vocational factors of age, education, and work experience, and whether the past relevant employment exists in significant numbers in the national economy is not considered. 20 CFR 416.960(b)(3) RFC is assessed based on impairment(s), and any related symptoms, such as pain, which may cause physical and mental limitations that affect what can be done in a work setting. RFC is the most that can be done, despite the limitations.

To determine the physical demands (exertional requirements) of work in the national economy, jobs are classified as sedentary, light, medium, heavy, and very heavy. 20 CFR 416.967 Sedentary work involves lifting of no more than 10 pounds at a time and occasionally lifting or carrying articles like docket files, ledgers, and small tools. 20 CFR 416.967(a) Although a sedentary job is defined as one which involves sitting, a certain amount of walking and standing is often necessary in carrying out job duties. *Id.* Jobs are sedentary if walking and standing are required occasionally and other sedentary criteria are met. Light work involves lifting no more than 20 pounds at a time with frequent lifting or carrying objects weighing up to 10 pounds. 20 CFR 416.967(b) Even though weight lifted may be very little, a job is in this category when it requires a good deal of walking or standing, or when it involves sitting most of the time with some pushing and pulling of arm or leg controls. *Id.* To be considered capable of

performing a full or wide range of light work, an individual must have the ability to do substantially all of these activities. *Id.* An individual capable of light work is also capable of sedentary work, unless there are additionally limiting factors such as loss of fine dexterity or inability to sit for long periods of time. *Id.* Medium work involves lifting no more than 50 pounds at a time with frequent lifting or carrying of objects weighing up to 25 pounds. 20 CFR 416.967(c) An individual capable of performing medium work is also capable of light and sedentary work. *Id.* Heavy work involves lifting no more than 100 pounds at a time with frequent lifting or carrying of objects weighing up to 50 pounds. 20 CFR 416.967(d) An individual capable of heavy work is also capable of medium, light, and sedentary work. *Id.* Finally, very heavy work involves lifting objects weighing more than 100 pounds at a time with frequent lifting or carrying objects weighing 50 pounds or more. 20 CFR 416.967(e) An individual capable of very heavy work is able to perform work under all categories. *Id.*

Over the past 15 years, the Claimant worked as a tow truck driver whose primary responsibilities included driving a tow truck, changing flat tires, and towing vehicles utilizing dollies weighing less than 100 pounds. Given these facts, the Claimant's past work history is classified as unskilled, medium work.

The Claimant testified that he can lift/carry approximately 25 pounds, albeit with some chest pain; can walk approximately ½ block and he can stand for about ½ hour, again with some back discomfort. The Claimant experiences dizziness and get headaches when he bends over as well as experiences joint pain. The Claimant is able to grip and grasp with his left hand but has pain and swelling in his right. As detailed above, the Claimant's treating physician limited the Claimant's physical activity to less than sedentary.

If the impairment or combination of impairments does not limit physical or mental ability to do basic work activities, it is not a severe impairment(s) and disability does not exist. 20 CFR 416.920 In consideration of the Claimant's testimony, medical records, and current limitations, it is found that the Claimant is not able to return to past relevant work as a tow truck driver therefore the fifth-step in the sequential evaluation process is required.

In Step 5, an assessment of the individual's residual functional capacity and age, education, and work experience is considered to determine whether an adjustment to other work can be made. 20 CFR 416.920(4)(v) At the time of hearing, the Claimant was 55 years old thus considered to be of advanced age for MA-P purposes. The Claimant has an 8<sup>th</sup> grade education. Disability is found disabled if an individual is unable to adjust to other work. *Id.* At this point in the analysis, the burden shifts from the Claimant to the Department to present proof that the Claimant has the residual capacity to substantial gainful employment. 20 CFR 416.960(2); *Richardson v Sec of Health and Human Services*, 735 F2d 962, 964 (CA 6, 1984). While a vocational expert is not required, a finding supported by substantial evidence that the individual has the vocational qualifications to perform specific jobs is needed to meet the burden. *O'Banner v Sec of Health and Human Services*, 587 F2d 321, 323 (CA 6, 1978). Medical-Vocational guidelines found at 20 CFR Subpart P, Appendix II, may be used to satisfy the burden of proving that the individual can perform specific jobs in the national economy. *Heckler v Campbell*, 461 US 458, 467 (1983); *Kirk v Secretary*, 667 F2d 524, 529 (CA 6, 1981) *cert den* 461 US 957 (1983).

For individuals of advanced age who can no longer perform vocationally relevant past work, and who have a history of unskilled work experience, or who have only skills that are not readily transferable to a significant range of semi-skilled or skilled work that is within the

individual's functional capacity, or who have no work experience, the limitations in vocational adaptability represented by function restrictions to light work warrant a finding or disabled.

In the record presented, the Claimant's residual functional capacity for work activities on a regular and continuing basis does include the ability to meet at least the physical and mental demands required to perform light work. As noted above, light work involves lifting no more than 20 pounds at a time with frequent lifting or carrying objects weighing up to 10 pounds. 20 CFR 416.967(b) Even though weight lifted may be very little, a job is in this category when it requires a good deal of walking or standing, or when it involves sitting most of the time with some pushing and pulling of arm or leg controls. *Id.* To be considered capable of performing a full or wide range of light work, an individual must have the ability to do substantially all of these activities. *Id.* An individual capable of light work is also capable of sedentary work, unless there are additionally limiting factors such as loss of fine dexterity or inability to sit for long periods of time. *Id.* For individuals of advanced age who can no longer perform vocationally relevant past work, and who have a history of unskilled work experience, or who have only skills that are not readily transferable to a significant range of semi-skilled or skilled work that is within the individual's functional capacity, or who have no work experience, the limitations in vocational adaptability represented by function restrictions to light work warrant a finding or disabled. The Claimant has an 8<sup>th</sup> grade education and is of advanced age. After review of the entire record and using the Medical-Vocational Guidelines [20 CFR 404, Subpart P, Appendix II) as a guide, specifically Rule 202.02, it is found that the Claimant is disabled for purposes of the MA-P program.

The State Disability Assistance ("SDA") program, which provides financial assistance for disabled persons, was established by 2004 PA 344. DHS administers the SDA program

purusant to MCL 400.10 *et seq.* and Michigan Administrative Code (“MAC R”) 400.3151 – 400.3180. Department policies are found in PAM, PEM, and PRM. A person is considered disabled for SDA purposes if the person has a physical or mental impariment which meets federal SSI disability standards for at least ninety days. PEM 261, p. 1 Receipt of SSI or RSDI benefits based on disability or blindness, or the receipt of MA benefits based on disability or blindness (MA-P) automatically qualifies an individual as disabled for purposes of the SDA program. PEM 261, pp 1 – 2

In this case, because the Claimant was found disabled for the purposes of the MA program, the Claimant is disabled for purposes of the SDA program.

DECISION AND ORDER

The Administrative Law Judge, based upon the findings of fact and conclusions of law, finds the Claimant disabled for purposes of the Medical Assistance program and the State Disability Assistance program.

It is ORDERED:

1. The Department’s determination is REVERSED.
2. The Department shall initiate review of the September 11, 2008 application to determine if all other non-medical criteria are met and inform the Claimant and his authorized representative of the determination.
3. The Department shall supplement the Claimant any lost benefits he was entitled to receive if otherwise eligible and qualified in accordance with department policy.
4. The Department shall review the Claimant’s continued eligibility in accordance department policy in March of 2010.

Administrative Law Judge  
For Ishmael Ahmed, Director  
Department of Human Services

Date Signed: 03/10/09

Date Mailed: 03/11/09

**NOTICE:** Administrative Hearings may order a rehearing or reconsideration on either its own motion or at the request of a party within 30 days of the mailing date of this Decision and Order. Administrative hearings will not order a rehearing or reconsideration on the Department's motion where the final decision cannot be implemented within 90 days of the filing of the original request.

The Claimant may appeal the Decision and Order to the Circuit within 30 days of the receipt of the Decision and Order or, if a timely request for rehearing was made, within 30 days of the receipt date of the rehearing decision.
