14.5.3.2 Access-controlled egress doors. Where permitted by the Michigan building code, doors in the means of egress may be equipped with an approved entrance and egress access control system, provided that all of the following criteria are met:

(1) A sensor is provided on the egress side, arranged to detect an occupant approaching doors that are arranged to unlock in the direction of egress upon detection of an approaching occupant or loss of power to the sensor.

(2) Loss of power to the part of the access control system that locks the doors will automatically unlock the doors in the direction of egress.

(3) The doors are arranged to unlock in the direction of egress from a manual release device located 40 inches to 48 inches. (1015 mm to 1220 mm) vertically above the floor and within 60 inches (1525 mm) of the secured doors.

(4) The manual release device specified in 14.5.3.2 (3) is readily accessible and clearly identified by a sign that reads as follows: PUSH TO EXIT

(5) When operated, the manual release device shall result in direct interruption of power to the lock — independent of the access control system electronics — and the doors remain unlocked for not less than 30 seconds.

(6) Activation of the building fire-protective signaling system, if provided, automatically unlocks the doors in the direction of egress, and the doors remain unlocked until the fire-protective signaling system has been manually reset.

(7) The activation of manual fire alarm boxes that activate the building fire-protective signaling system specified in 14.5.3.2 (6) is not required to unlock the doors.

(1) It consists of a cross bar or a push pad, the actuating portion of which extends across not less than 1/2 of the width of the door leaf.

(2) Existing installations shall be mounted not less than 30 inches (760 mm), nor more than 48 inches (1220 mm), above the floor.

(3) It is constructed so that a horizontal force not to exceed 15 lbf (66 N) actuates the cross bar or push pad and latches. 7.2.1.7.1] 14.5.3.3.3 Required panic hardware and fire exit hardware shall not be equipped with any locking device, set screw, or other arrangement that prevents the release of the latch when pressure is applied to the releasing device.
